

Benefits

- Instantly bursts bulks of fat cells
- Improves circulation of blood and lymph
- Reduces the appearance of cellulite
- Increases metabolism
- Strengthens collagen proteins and encourages the production of new ones
- Tightens and firms facial and body skin
- Extremely effective at combating forehead wrinkles
- Smooths out cellulite bulges

Our trained professionals are here for you. Book a session with us today.

Total Body Sculpting

Advanced technology for safe and painless cellulite treatment, fat reduction, and body toning with no downtime

Ultrasonic Cavitation

Ultrasonic cavitation handpiece allows for the disruption of cellular membranes in adipocytes or fat cells. As a result, it promotes body contouring, slimming, and weight loss. Here's how it works: the high pressure on the adipocytes caused by intense ultrasound waves forces those cells to collapse and their fatty contents to leak out into the spaces between cells until they eventually leave the body.

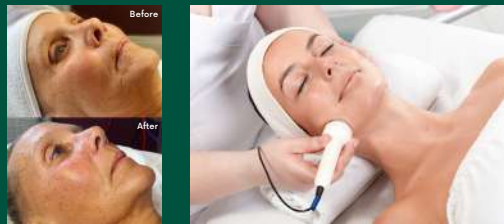

Facial Treatments

1 Radiofrequency Skin Tightening

This is a nonsurgical and noninvasive skin tightening and anti-aging treatment. During RF treatment, current flows from the electrodes of an RF device into your skin, heating the tissues beneath to stimulate collagen and elastin production.

RF is excellent for eliminating fine lines and wrinkles, smoothing out cellulite bulges, promoting collagen and elastin production, and tightening the skin.

2 Electroporation

Electroporation uses an alternating current to improve the absorption of active ingredients in serums and skin solutions. It does so by applying powerful voltage power and radiofrequency electromagnetic waves into the skin, which temporarily allows cellular membranes to become more permeable for the intake of molecules.

Electroporation is great for treating acne scars, fine lines, facial resurfacing, localized fat, loose skin, hyperpigmentation, and more.

Vacuum RF For the Body

Vacuum massages the skin to increase blood flow and lymphatic drainage, simultaneously supporting healthy skin and circulation. Collagen and elastin, two proteins essential for keeping the skin tight, firm, and glowing with youth, production is also supported via this treatment. In addition, vacuum therapy has been praised as a non-invasive treatment that can reverse the appearance of your skin's age by ten years. On this function, two electrodes lie on the rim of the vacuum handpiece. These two technologies create even more dramatic tightening, and overall, skin improves results by working in conjunction.
