Hair Removal with Advanced safety features, a multifaced cooling system for comfort and fast treatment times, for pain-free enjoyable treatments

Before & After

Laser Hair Removal

Laser hair removal is one of the most commonly done cosmetic procedures in the US. It beams highly concentrated light into hair follicles. The pigment in the follicles absorbs the light and destroys the hair. Lasers help remove unwanted hair from the face, leg, chin, back, arm, underarm, bikini line, and other areas.

Benefits of laser hair removal include:

Precision:

Lasers can selectively target dark, coarse hair while leaving the surrounding skin undamaged.

Speed

Each laser pulse takes a fraction of a second and can treat many hair follicles simultaneously. The laser can treat an area approximately the size of a quarter every second. Small areas such as the upper lip can be treated in less than a minute, and larger areas, such as the back or legs, may take up to an hour.

Predictability

Most patients have permanent hair loss after an average of 3 to 7 sessions.

Common Treatment Zones

- Arms
- Underarms
- Face
- Bikini
- Legs
- Hands
- Stomach
